The TDF was submitted to ESAT last week. Just asking the question now before ESAT says that they have a problem.

They are at existing locations. Data will be put these in SCRIBE under your task order.

Subject: Upper Animas Minisipper Study

Dan,

I talked to Paula and Nicole about these samples. Paula said that USGS is collecting these samples, both the minisipper and grab samples. Are these new locations or existing locations? How do we get the locational data from USGS? Does USGS or ESAT put these data in scribe? Is USGS providing locational data in a format that John has specified in his guidance documents?

Thanks,

Jeff Mosal
